Take a look at the life cycle of “stuff” that you use in your everyday life.

Follow its journey:
- Extraction – Where the materials are found and how they are removed for use?
- Production – How is the thing made?
- Distribution – Where and how is the item transported/sold?
- Consumption – Where do you buy this item? How often?
- Disposal – when you’re done with your “stuff” where does it go?
- A way forward – What are some things you could do to improve the impact that your “stuff” has on the world? This could include but is not limited to looking at the type of product, where you buy it, how often, how you dispose of it etc.

This final poster should be 16” x 20” (either landscape or portrait orientation) and should contain a separate works cited page (minimum 5 sources) uploaded to your Drive folder for this class.

This project will be printed and presented in the last week of classes to your peers and posters may be retained.
